

Clay tiles

Marley Roofing and Marley Building Systems are the Southern African subsidiaries of Etex, a Belgian industrial group that manufactures and markets high quality building materials and systems. As Etex, we strive to be the innovative leader in sustainable and affordable building solutions.

To meet growing local needs for affordable, comfortable housing, and lead the global trend towards more sustainable building solutions, in South Africa we have developed a strategy based on four core businesses: cladding and building boards in fibre cement and plaster, roofing materials, passive fire protection and high performance insulation. This has earned us a place in the market as a leading supplier of high quality and affordable roofing, cladding and dry construction products.

With Marley Roofing's experience that spans more than 65 years, we aim not only to supply products and services that redefine building methods, but also give complete peace of mind.

Product Portfolio

Marley Roofing is a long-time frontrunner in concrete, clay and fibre cement roofing solutions. Marley Roofing dedicates a great deal of time and attention to its roofing supplies range and for this reason is a trusted name in the market.

With over 65 years' experience, we have industry knowledge that is second to none and can offer our customers complete confidence in the products and services we provide.

Our market leading products deliver a combination of eco-friendly materials and surpass all performance demands.

MARLEY

Roofing

INDIVIDUAL COOKING

Tiles of higher quality, obtained with an advanced technological process.

RESISTANT

Soluble salts resistant. Perfect for coastal areas.

RESISTANT

Ice resistance. Suitable even in areas with big thermal amplitudes.

PACKS

Provide an easier handling and more security on tiles transport.

WARPING FREE

Elimination of breaks and defects on the roof covering.

EXACTNESS

Dimensional exactness. Easy and economic assembly. Perfect roofs.

IMPERMEABLE

Low porosity, 3% to $\pm 1\%$. Sandstone effectiveness.

WATERTIGHT

Perfect fitting. Watertightness warranty.

LONG LASTING

Long lived roof covering.

RESISTANT

High flexural strength resistance. More economy obtained by reduction of breaks.

ECO-TECHNOLOGY

Environment friendly technology and production processes.

HYGROSCOPIC

Release of humidity from the interior. Low condensing. Thermal comfort.

LIGHTNESS

Lightweight roof.

QUANTITY PER PALLET

Higher quantity per pallet.

APPROVED

Approved by the quality control.

THE ROOFS ARE NOT JUST SCENERY. THEY ARE PART OF OUR LIVES.

Inspired by the traditional Lusa roof tile, the Advance Premium Lusa roof tile combines the popularity of the tile form with the technical consistency of the production process. It is different and revolutionary and the most demanding costumers have already taken a liking to it. In the manufacturing of the ADVANCE Premium roof tile, sandstone clay and plaster of paris moulds are used with results in it, being a reference standard with the highest levels of resistance and a 35 Year Guarantee.

ENVIRONMENTAL CONCERN

Marley Building System recognises environmental responsibility as a management tool for profitability as well as a vital component in furthering the productive and competitive excellence of the company. More than simply adopting sustainable efforts, we are truly committed to establishing a wholly environmentally friendly mind-set throughout the value chain, which includes our employees, suppliers and partners. This attitude is not just founded on claim – it is a green industrial process, with transverse effective gains for the consumer and society in general.

GUARANTEE

The Advance Premium products are guaranteed for 35 years after purchase as long as good laying practices of the roof tile are complied with. The Marley Building Systems will proceed to supply free of charge the tiles and accessories which jeopardise the functionality of the roof.

CERTIFICATION

The Marley Building Systems has its Quality Management System and Environment certificate, according to ISO 9001 and ISO 14001.

The Advance Premium, UM Canudo and UM Lusa clay roofing tiles are certified according to standard EN 1304. This standard establishes the compliance criteria for the tiles and accessories.

All products manufactured by Marley Building Systems are subject to a rigorous quality control at various stages of production, provided by qualified personnel and supported by a modern laboratory.

SHADES

The wide variety of shades and finishings, from natural to glazed, allows an unending list of combinations and in this way, it contributes with quality, precision and good taste to the safekeeping of the most popular architectonic traditions of roofs in all of Europe.

As far as the colour, finishing and shades are concerned, the roof tile after being bought will not be considered defective when compared with the sample. We advise the laying of the tile, taken from the different boxes or pallets in such a way as to make use of the nuance in this product for natural colours and finishings.

VENTILATED ROOF COVER SYSTEM

The Ventilated Roof Cover System is the result of research done by Marley Building Systems. It contributed to the optimisation of ceramic roofs adding important features to their performances: longevity of the roof tile and of the whole roof structure; reduced maintenance and natural thermal comfort in the dwellings. The specifically developed accessories are essential for the roofs to function well and to assure the ventilation and air circulation (micro ventilation), which is crucial for the effective consolidation of the System.

APPROVED

Approved by the quality control.

The simplicity of the forms in perfect harmony with the surrounding environment.

The Advance Premium Marseille roof tile is used in the most varied types of roof covers and with its discreet but elegant contour, it lends harmony and a very characteristic modelling to the roofs. It is one of the most successful models in all Europe and is known for being used in restoration roof covers and in the most daring projects.

The tile's low absorption, combined with pronounced transverse and longitudinal interlocks, ensures complete sealing of the roof. On the other hand, the low weight of the tile permits distributing a greater number of tiles per pallet, and consequently, per container, making it more profitable.

In the manufacturing of the ADVANCE Premium roof tile, sandstone clay and plaster of paris moulds are used with results in it, being a reference standard with the highest levels of resistance and a 35 Year Guarantee.

SHADES

Manufactured in Natural Red, Aged Red and Eclipse tone, the Advance Premium Marseille clay tile is a classic in the harmonisation of construction with the liberal expression of nature.
